

TRANT

ABOUT US

Our mission is to be the first choice Engineering Procurement and Construction Company for our clients in the UK and overseas. Established in 1958, the Company has successfully grown to an award-winning organisation now employing more than 1000 people with turnover in excess of £130 million.

We are a dynamic, multi-discipline company providing innovative, technology-led solutions to complex engineering challenges across the globe.

Through collaboration with our strategic technology partners and enhancing our in-house design and manufacturing capability, we have aligned the company to be at the forefront of engineering excellence.

**Have you ever thought
about working in the
construction industry?**

You can earn money while gaining a qualification in a subject that interests you. We have over 30 apprentices currently working for **Trant Engineering** and have had a successful completion rate.

We have any apprenticeship for everyone from college level to degree level.

We believe apprentices are the way of the future!

Apprenticeships

“earn as you learn”

I am currently working towards a degree in Civil Engineering (BEng Hons) as an apprentice site engineer.

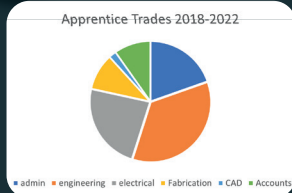

The course and work are both challenging yet rewarding and Trant has been very accommodating by allocating revision days before exams as well as providing extra tutoring with in house experts when required to further develop our knowledge.

Trant has also provided us with an ICE mentor to help us on our way to becoming ICE members as soon as we achieve our qualification. One of the biggest benefits of doing the apprenticeship is that things that I do in my job role can be used to help in university and vice versa

Josh Arnell

CIVIL ENGINEERING (BENG HONS)

The graph shows all the sectors we have hired in over the last 4 years.

“ We feel that apprentices are a key part of our business, and we are happy to be able to offer our support to them.

There are so many varied opportunities that we can provide to our apprentices such as Engineering, Design, Manufacturing and office administration.

The great thing about being an apprentice is that they get paid to work while getting professional qualifications.

Our apprenticeship scheme is for any age.”
