

INTERNATIONAL SERVICES

DELIVERING **TOTAL ENGINEERING**

OUR INTERNATIONAL SERVICES

Our global footprint is constantly increasing with our products and services now being utilised in 15 countries around the world. Our International operations now include works within all our sectors, including oil & gas refineries in Northern Africa, water & wastewater treatment across Europe and a new power station in the Falkland Islands. We also provide crucial support to the UK Government by delivering defence projects in remote locations across the world.

Our transportation and logistics teams ensure that materials are ordered, processed and shipped to our project locations to meet project key dates. With over twenty years' experience in global shipping we have amassed a network of global suppliers and freight specialists. We have extensive experience in obtaining security clearance for our project delivery teams. All security clearance and work visas are processed internally.

Customer care is vital to our international projects. We believe in integrating with local communities where we work. We offer UK accredited training and skills development programmes to local employees. We ensure that we contribute to local economies by utilising the local supply chain.

Fuel Storage Projects

- Tank farm new build
- Tank refurbishment
- Bund replacement and upgrades
- Process pipework design and installation
- Electrical design and installation
- Control & automation design and installation
- Infrastructure new build and replacement

Power Station Infrastructure

- Power station new build
- Front-end engineering and site investigation works
- EPC project delivery capability
- District heating design and installation

- Airport upgrade projects

Global products and services

About Trant Engineering

Our mission is to be the first choice Engineering Procurement and Construction Company for our clients in the UK and overseas.

Our clients can benefit from an extensive range of in-house services including process, MEICA and civil design, Offsite Manufacture & Assembly, Instrumentation Control & Automation products and Commissioning services. This internal capability allows us offer innovation and efficiency to the whole life cycle of EPC projects across all our sectors.

Our fully Integrated Management Procedures with dedicated gateways and managerial swim lanes ensures the technical and commercial health of our projects. These robust procedures give us the ability to deliver complex work programmes in the most challenging and regulated work environments.

Clients can be assured of our commitment to complete their project to high specification, with zero incidents and minimal impact on their operations and neighbouring environment.
